Savanna Bites Website Project

Student Name: Fatima Bridgette Barrie
Project Title: Savanna Bites Web Application
Academic Year: 2026

Project Overview

Savanna Bites is a modern, responsive web application designed for a restaurant concept focused on local flavours, family-friendly dining, and warm hospitality. The project serves as an interactive platform for potential customers to explore the menu, learn about the brand, enquire about services, and book table reservations.

Features

- **Home Page (`index.html`):** Features a welcoming hero banner, highlighted menu items (Grilled Chicken, Seafood Rice, Chef's Special), and call-to-action buttons for table booking and enquiries.
- **About Page (`about.html`):** Highlights the backstory of Savanna Bites, its core values (Fresh Ingredients, Family Friendly, Great Experience), and brand ethos.
- **Services Page (`services.html`):** Outlines available restaurant offerings, including Dine-In, Takeaway, Reservations, Private Events, Catering, and Family Dining.
- **Contact Page (`contact.html`):** Provides location details, operating hours, phone/email contacts, social links, and an interactive enquiry form with submission feedback.
- **Reservation Page (`reservation.html`):** Includes a comprehensive booking form for table requests specifying date, time, party size, and special requests.

Technologies Used

- **HTML5:** Semantic markup structure across all web pages.
- **CSS3:** Custom stylesheet (`main.css`) providing custom layout styles, buttons, grid/flex layouts, and page styling.
- **JavaScript:** Client-side form handling and user feedback scripts.

Setup & Execution

1. Download or clone the project repository.
2. Open any of the `.html` files (such as `index.html`) in a modern web browser (e.g., Chrome, Firefox, Safari, Edge).

3. Use the navigation menu at the top of the page to move across the different sections.
